SALT LAKE CITY, July 17th 2023/PRNewswire/ -- ReddyPort, a medical device technology company, announced today that the US Food and Drug Administration (FDA) has transitioned from EUA and granted 510(k) premarket clearance for the Company's Non-Invasive Ventilation Elbow device. ReddyPort's Elbow device features a one-way valve that enables seamless oral access for the purpose of delivering (Q2/Q4) oral care without the risk of NIV (non-invasive ventilation) mask removal or reducing the risk of a patient's lung compliance. With ReddyPort's elbow, bedside clinicals are empowered to use ReddyPort's oral care applicators (toothbrush, suction, swab sticks) for routine Q2/Q4 oral care and dry mouth relief while minimizing un-planned mask removal that often leads to improperly fitted masks, pressure injuries and time-consuming re-fitting processes.

Since our launch, the ReddyPort system has serviced over 7,000 patients in partnership with clinical teams that have delivered over 45,000 compliant oral care sessions.

ReddyPort's patented elbow device enables oral access for use of a variety of tools designed to enhance BiPAP® patient outcomes. For instance, ReddyPort's microphone technology amplifies audible speech tones while minimizing background noise helping patients to regain their ability to effectively communicate with caregivers and family members. The Joint Commission supported by the Patient's Bill of Rights incentivizes Clinicians to protect every patient's ability to communicate with family members and caregivers as an essential part of quality patient care.

ReddyPort Elbow and Microphone in Use on a Patient

"ReddyPort's patented elbow is central to the eco-system we are building to help mitigate clinical obstacles tied to NIV therapy from dry-mouth, oral biofilm accumulation to speech recognition," says Tony Lair, ReddyPort CEO.

About ReddyPort

ReddyPort is focused on enabling a better care experience for patients on NIV. ReddyPort provides solutions for NIV patients to improve satisfaction, reduce risk and cost, enable better workflows, and enhance quality of care. For comments or feedback, visit us at www.reddyport.com
